**6** A mixture consisting of gaseous compounds, S, T, U and V, is slowly cooled.

Commented [SXF(2]: I added comma

| Gaseous Compound | $M_r$ | Compound |
|---|---|---|
| S | 72 | $CH_3CH_2COCH_3$ |
| T | 74 | $CH_3CH_2CH(OH)CH_3$ |
| U | 72 | $(CH_3)_4C$ |
| V | 72 | $CH_3CH_2CH_2CH_2CH_3$ |

In which order, from first to last, will the compounds condense to form their liquids?

**A** T → S → V → U

**B** U → V → S → T

**C** S → T → V → U

**D** V → U → S → T
